

# CHASE GOLDFELD

## DATA SCIENTIST

## Experience

### Lambda School Data Science Team Lead

Remote  
Aug. 2020 to Current

- Mentored, led, and communicated with nine students through the data science curriculum
- Hosted daily stand-ups for students on modules and weekly 1:1's
- Improved students problem-solving skills by working through live code challenges
- Reviewed each student's code and gave feedback on areas of improvement
- Provided support through live debugging and Q&A's for all ends of the syllabus

## Projects

### Groa May 2020

Groa uses machine learning to power an innovative recommendation engine that generates tailored movie suggestions to users based on their unique taste.

**Tech Stack:** Word2Vec | AWS | PostgreSQL | Google Analytics | FastAPI

- Engineered the Google Analytics API to collect, measure, and report key metrics to stakeholders with data visualizations
- Used Slack, Trello, and Notion to collaborate remotely with a team of four Data Scientists and five Web Developers over the span of four weeks
- Built the Groa API using the FastAPI web framework and serves recommendations using a Word2Vec Model
- Implemented the Groa database with PostgreSQL on the AWS Relational Database Service
- Utilized ElastiCache (running Redis) for caching and Elasticsearch service from AWS for searching
- Successfully improved Groa: 66% Decreased Bounce Rate | Improved Model Response Time of 300% | Increased Average Session Duration Time of 665%
- URL | <https://www.groa.us>
- URL to repo | <https://github.com/Lambda-School-Labs/Groa-ds>

### Squall Hackathon Jan. 2020

Squall is a mobile application that allows users in select cities to receive real-time extreme weather updates on their mobile phones via SMS.

**Tech Stack:** Heroku | SQLite | Twilio API

- Utilized Twilio's API and developed the back end using Python to mine and wrangle data to trigger SMS notifications to the user
- Collaborated remotely with a team of two Web Developers and one Data Scientist to build an MVP for a functional mobile application in 24 hours
- Architected the relational database management system with SQLite
- Deployed application using Heroku. URL | <https://squallhackathon.herokuapp.com/>
- URL to repo | <https://github.com/AuFeld/SquallHackathonBackend>

### Market Prediction

Market Prediction makes use of machine learning to construct and train a neural network to predict the movement of a stock with time-series data.

**Tech Stack:** TensorFlow | Scikit-learn | Beautiful Soup

- Initiated a web-scraper with Beautiful Soup that identified current S&P500 companies
- Created an ETL process with Python and scrapped S&P500 company names to import and wrangle data from yfinance
- Utilized Jupyter to construct the neural network architecture and trained the model by identifying days when the stock increased in price
- Recorded a 52.1% accuracy score and outperformed the baseline of 51.7% by hyperparameter-tuning with a grid search: epochs | batch size | learn rate
- URL to repo | [https://github.com/AuFeld/Strategy\\_Testing](https://github.com/AuFeld/Strategy_Testing)

### Transfermarket

Transfermarket analyzes companies within a competitive niche market and a high barrier of entry. The EDA focuses on how well the companies invested in assets and their returns within a 365 day period.

**Tech Stack:** Jupyter | Scikit-learn | Matplotlib | Seaborn | Eli5

- Applied Scikit-learn to construct a pipeline that trained and tested data with a Random Forest Classifier that identified the most important features that contributed to successful and unsuccessful assets
- Created data visualizations with Matplotlib and Seaborn for storytelling that pinpointed different investment strategies based on the corporation's market capitalization value
- Made use of Eli5 to display permutation importance based on the feature and its weight
- URL to repo | <https://github.com/AuFeld/Transfermarket>

## Skills

### MACHINE LEARNING

Regression

Neural Networks

Natural Language Processing

Statistics

### COMPUTER PROGRAMMING

Python

Jupyter

Linux

Git

SQL

### DATA MANAGEMENT, ENGINEERING, & DEPLOYMENT

RDBMS: PostgreSQL | Heroku | SQLAlchemy

Non-Relational DBMS: MongoDB

DevOps: Docker

Frameworks: Flask | FastAPI

### DATA VISUALIZATIONS

Google Analytics

Tableau

Seaborn

Matplotlib

Plotly

### COMPUTER SCIENCE

Data Structures

Algorithms

## Education

### Lambda School

Data Science

Aug. 2020

### Florida Atlantic University

BBA Business Management

May 2010

## Previous Work Experience

### Real Estate Associate

2015 to 2019

- Analyzed the residential real estate market in Palm Beach, FL
- Built relationships based on the foundation of trust and integrity, resulting in \$17m in sales and \$200k in yearly rental revenue
